

Job Title: Engineering Lead
Location: London Bridge
Salary: DOE

- Good career development opportunities
- Great perks package
- Put your name to the next big IoT products in the UK & USA
- Work with a talented and friendly team
- Lovely new office in London Bridge
- Genuine opportunity for a talented and driven individual

If you are a talented, innovative and ambitious team leader with a strong software engineering background, looking to play a key role in a successful and rapidly expanding start-up, we can offer you the challenge and opportunity that you are looking for.

The job will involve managing a growing and diverse development team of firmware and apps developers, computer vision scientists, factory engineers, and the like by leading, mentoring and achieving excellence as a team.

As our overall engineering is performed at both a high and a low level, we are looking for an engineering lead with a great deal of hands on experience; with very strong skills in development, debugging, problem solving and peer reviews – the person the team can rely on to help achieve the teams overall goals.

Activities will additionally include working with customer support for technical issues, testing and product deployment, contribution to documentation and progress reports, and providing clarity on progress and issues to management.

The candidate must love programming and be enthusiastic in their work. The candidate should also be well organised, interface well in team meetings and present well to end-customers and distributors.

Background

Smarter is an award winning British connected home company with a product range that connects existing appliances to the internet, allowing you to control them from your phone. At Smarter we design, manufacture and distribute our products throughout Europe and the US with customers such as Currys, John Lewis and Best Buy. We are a passionate group of people based in London with plans to expand the business globally. Growing at a rate of 300% we are set to become one of the fastest growing UK technology companies.

Core Skills/Experience

The following skills/experiences are considered a must in-order to be considered for employment:

- Current, strong engineering skills.
- Knowledge of networking protocols.
- Investigate technical aspects and root causes of problems
- Experience with consumer products
- Strong debugging capability (preferably in debugging microcontrollers).
- Strong commenting and documentation skills.
- Ability to learn and adapt to new architectures, both in hardware and in software.
- Ability to work co-operatively but independently within a small team.

Requirements

- Able to demonstrate extensive experience within team leadership role
- Able to demonstrate extensive experience in software engineering/development position
- Experience with connected devices (WiFi/Bluetooth/Zigbee...)
- Experience within start-ups is desirable
- Must be detailed, organised and proactive
- Ambitious, with passion and a ton of energy
- Enjoys a challenging and fast-paced environment
- A passion or interest for new consumer technology and the emerging media landscape
- Ability to work on their own and as part of a team
- Excellent communication skills (verbal and written)
- Must have experience with working on products designed for mass production

Due to the number of applications we receive, only successful candidates will be contacted.
